

Studio Planner.

A quieter way to turn a full head into a clear week.

How to use the files

Open the editable SVG artwork in a vector editor and make a copy before you begin. Keep this guide nearby while you customize it for your own work.

1. Pick one priority for the week and write down what finished would look like.
2. Break the work into a few focus, build, and review sessions; leave open space for interruptions.
3. Duplicate the editable worksheet for the next week and keep what helped rather than starting from scratch.

Northstar Studio demo edition. These sample files are used for local product demonstrations.
